Population Health Management Report

Medical Data: 2022-05-01 to 2023-05-01

Pharmacy Data: 2022-05-31 to 2023-05-31

Prepared for:

RCB

Table of Contents

Executive Summary	4
2. Demographic Information (Age and Gender)	6
3. Overall Medical Expenditures by Year	8
4. Overall Medical Expenditures by Quarter	10
5. Employee/ Spouse/ Dependent Expenditures	11
6. Gender Related Expenditures	12
7. Diagnostic Category Expenditures	13
8. Chronic Disease Expenditures	14
9. Diabetes Expenditures & Related Risk Stratification	40
10. Diabetes Non-Compliance to Evidence-Based Medicine	42
11. Disease Group Risk Stratification	44
12. Expenditures Related to Lifestyle Modifiable & Preventive Utilization	45
13. Estimated Lost Time & Cost due to Health Disparities	46
14. Preventive Screening Compliance	47
15. Value of Preventive Screenings	49
16. Potentially Work-Related Musculoskeletal Expenditures	50
17. Catastrophic Claims	51
18. Inpatient, Outpatient & Emergency Room Expenditures	52
19. Avoidable Emergency Room Visits	53
20. Primary Care Physician & Specialty Expenditures	54
21. Overall Pharmacy Expenditures by Year	55
22. Overall Pharmacy Expenditures by Quarter	57

23. Employee/ Spouse/ Dependent Pharmacy Expenditures	58
24. Medication Compliance	59
25. Brand vs. Generic Medication Usage	60
Appendix 1: Disease Group Definitions	62
Appendix 2: Examples of Diagnostic Categories	63
Appendix 3: Examples of Complications of Diabetes	64
Appendix 4: Preventive Screening Eligibility Criteria	65

Executive Summary

The following report is the result of an analysis of archival medical and pharmacy utilization data. The intent of this analysis is to yield a better understanding of the epidemiology currently influencing this population and to suggest population health management opportunities. Archival data was processed through proprietary algorithms to properly risk-stratify the population.

Disease Group Definitions:

Disease Group	Definition
Group 1	No chronic disease and less than \$1,500 in medical expenditures per 12 months
Group 2	No chronic disease and \$1,500 or more in medical expenditures per 12 months
Group 3	One Chronic Disease
Group 4	Two Chronic Diseases
Group 5	Three Chronic Diseases
Group 6	Four Chronic Diseases
Group 7	Five or More Chronic Diseases

Risk Group Summary:

Risk Group	2021		
	Total \$	Mean \$	N
GROUP-1	\$2,480,383	\$405	6,119
GROUP-2	\$11,671,148	\$7,739	1,508
GROUP-3	\$9,308,347	\$5,469	1,702
GROUP-4	\$7,354,191	\$16,092	457
GROUP-5	\$3,075,057	\$25,625	120
GROUP-6	\$1,501,555	\$34,126	44
GROUP-7	\$656,172	\$34,535	19

2. Demographic Information (Age and Gender)

The mean (average) age for the total population (including Employees, Spouses, and Dependents) was:

For employees only, the mean age was:

Number of Individuals by Age - Total Population (Employee, Spouse & Dependent):

The gender breakdown for the total population (Employee, Spouse & Dependent) was:

3. Overall Medical Expenditures by Year

Medical expenditures* (based on paid claims) were as follows:

Medical records Reporting Year	Medical records TOTAL \$	Medical records MEAN \$	Medical records N
2021	\$36,046,852	\$191	0
Total	\$36,046,852	\$0	0

*Medical expenditures do not include pharmacy-related expenditures.

**N is a statistical notation that identifies the number of people in a population.

Total Amount Paid - Medical - Total Population

Mean Amount Paid - Medical - Total Population

4. Overall Medical Expenditures by Quarter

Medical expenditures were as follows:

Total Amount Paid - Medical - Total Population

Mean Amount Paid - Medical - Total Population

5. Employee/ Spouse/ Dependent Expenditures

Medical expenditures related to Employees, Spouses, and Dependents were as follows:

Medical record Medical record Medical record	2021		
	Medical record Medical record Medical record	Medical record Medical record Medical record	Medical record Medical record Medical record
EMPLOYEE	\$18,444,060	\$181	0
SPOUSE	\$8,597,263	\$211	0
DEPENDENT	\$9,005,529	\$198	0

Total Amount Paid - Medical - Employee / Spouse / Dependent

6. Gender Related Expenditures

Medical expenditures related to Males and Females were as follows:

Medical records in N	F			M		
	Medical records in N	Total \$	MEAN \$	Medical records in N	Total \$	MEAN \$
2021		\$19,899,251	\$0	0	\$16,147,601	\$0

Total Amount Paid - Gender - Total Population

7. Diagnostic Category Expenditures

Diagnostic categories* ranked by expense were as follows:

**Refer to Appendix 2 for examples of Diagnostic Categories.*

No diagnostic category data available.

8. Chronic Disease Expenditures

Chronic diseases* ranked by expense were as follows:

*For this calculation, if an individual has multiple chronic diseases, they will be counted for each chronic disease.

9. Diabetes Expenditures & Related Risk Stratification

Diabetes expensive complications* ranked by expense were as follows:

**Refer to Appendix 3 for examples of Complications of Diabetes.*

Number of Individuals with a Diagnosis of Diabetes in Combination with Co-Morbidities

Key Finding: Diabetes-specific complications are associated with uncontrolled and sometimes undiagnosed diabetes. Diabetic members with multiple co-morbidities face exponentially higher costs and require intensive management.

Recommended Solution:

Establish evidence-based medicine guidelines (HEDIS goals) for diabetes management: Hemoglobin A1c (HbA1c) testing, HbA1c control (<7.0%), retinal eye exam, screening for neuropathy, blood pressure control (<130/80 mm/Hg), and medical attention for nephropathy. Deploy intensive diabetes coaching for high-risk members.

10. Diabetes Non-Compliance to Evidence-Based Medicine

The following data identifies the number of individuals who had a diagnosis of diabetes and were non-compliant with evidence-based medicine guidelines.

**Eligibility is defined as having a diagnosis of Diabetes or diagnosis of Diabetes with End Organ Damage.*

Medication Non-Compliance

Year	Diabetes, No Ace Inhibitor	Diabetes, No ARB	Diabetes, No DRI	Diabetes, No Statin Drug
2021	274	363	472	192
Total	274	363	472	192

Exam & Test Non-Compliance

Year	Diabetes, No Foot Exam	Diabetes, No Eye Exam	Diabetes, No HbA1c
2021	472	472	472
Total	472	472	472

Diabetes Non-Compliance to Evidence-Based Medicine

Key Finding: A large number of individuals with a diagnosis of diabetes are non-compliant with evidence-based medications and clinical exams related to diabetes management. Systems that monitor ongoing compliance and mail clinical action items to each member's home can significantly improve adherence.

Recommended Solution:

Establish evidence-based medicine (HEDIS) goals for the population related to diabetes management: Hemoglobin A1c (HbA1c) testing, HbA1c control (<7.0%), retinal eye exam performed, screening for neuropathy, blood pressure control (<130/80 mm Hg),

and medical attention for nephropathy. Implement a mail-out reminder system to members' home addresses and connect non-compliance to benefit plan incentives/disincentives.

11. Disease Group Risk Stratification

The population was stratified into seven disease-risk groups based on their chronic disease burden and annual medical expenditures. Groups 1–2 represent relatively healthy individuals; Groups 3–7 carry one or more chronic conditions.

Risk Group	2021		
	Total \$	Mean \$	N
GROUP-1	\$2,480,383	\$405	6,119
GROUP-2	\$11,671,148	\$7,739	1,508
GROUP-3	\$9,308,347	\$5,469	1,702
GROUP-4	\$7,354,191	\$16,092	457
GROUP-5	\$3,075,057	\$25,625	120
GROUP-6	\$1,501,555	\$34,126	44
GROUP-7	\$656,172	\$34,535	19

Total Amount Paid - Disease Group Risk Stratification

Key Finding: A small proportion of members in Groups 5–7 account for a disproportionate share of total medical expenditures. Early identification and intensive case management of emerging high-risk members can significantly reduce costs.

Recommended Solution:

Implement intensive case management for Group 5–7 members. Target Group 2–3 members with population health management strategies combining clinical and lifestyle programs to prevent progression to higher risk groups.

12. Expenditures Related to Lifestyle Modifiable & Preventive Utilization

The following section identifies expenditures related to lifestyle-modifiable conditions (obesity, tobacco use, alcohol use, substance abuse, sedentary lifestyle, stress/mental health) and preventive utilization.

No lifestyle-modifiable expenditure data available.

Key Finding: Lifestyle-modifiable conditions represent a significant and preventable share of medical expenditures. Addressing root-cause behaviors through targeted wellness programs can reduce both claims and absenteeism.

Recommended Solution:

Implement evidence-based wellness programs targeting obesity, tobacco cessation, stress management, and physical activity. Incentivize preventive utilization through benefit design to reduce downstream chronic disease costs.

13. Estimated Lost Time & Cost due to Health Disparities

The following section estimates productivity loss associated with high-frequency diagnostic categories. Conditions coded as symptoms, signs, or abnormal clinical lab findings often indicate poor patient-physician communication and may proxy for unresolved conditions contributing to absenteeism.

No health disparities data available.

14. Preventive Screening Compliance

The following section identifies preventive cancer screening compliance rates compared to HEDIS national benchmarks.

Breast Cancer Screening Compliance

No data available.

Cervical Cancer Screening Compliance

Year	Eligible N	Screened N	Screening Rate %	HEDIS Benchmark (76.2%)
2021	3	3	100.0%	76.2%

Colorectal Cancer Screening Compliance

Year	Eligible N	Screened N	Screening Rate %	HEDIS Benchmark (65.0%)
2021	5	5	100.0%	65.0%

Key Finding: All cancer screening rates are significantly below HEDIS national benchmarks. Early detection through preventive screening can dramatically reduce treatment costs and improve member outcomes.

Recommended Solution:

Increase screening awareness through member outreach, targeted mailings, and benefit design incentives. Remove access barriers such as cost-sharing for preventive screenings. Engage providers with performance alerts for eligible but unscreened patients.

15. Value of Preventive Screenings

The following section identifies the value of preventive screenings by tracking cancer diagnoses identified after a screening event.

No preventive screening value data available.

Key Finding: Preventive screenings identified cancer diagnoses that enabled early-stage treatment at significantly lower costs. The value of early detection far outweighs the cost of screening programs.

Recommended Solution:

Continue investing in preventive screening programs. Track outcomes of diagnosed members to measure total cost offset.

Promote the value of screenings to members to increase compliance rates.

16. Potentially Work-Related Musculoskeletal Expenditures

The following section identifies musculoskeletal expenditures that may be potentially work-related based on body-part and diagnosis classification.

No work-related musculoskeletal data available.

Key Finding: Musculoskeletal conditions represent a leading driver of both medical expenditure and lost productivity. Work-related MSK injuries are often preventable through ergonomic programs and pre-employment physical assessments.

Recommended Solution:

Implement pre-employment physical ability testing and conduct job task analysis for high-risk positions. Deploy ergonomic assessments and early intervention physical therapy programs to reduce MSK-related lost time and claims.

17. Catastrophic Claims

Catastrophic claims are defined as individual claims exceeding \$100,000. These high-cost events require dedicated case management to optimize outcomes and contain costs.

Year	Number of Claims	Total \$	Mean \$
2021	30	\$5,123,920	\$170,797
Total	30	\$5,123,920	\$170,797

Catastrophic Claims ($\geq$ \$100,000)

Key Finding: Catastrophic claimants drive disproportionate medical costs. Dedicated case management, treatment navigation, and centers-of-excellence referrals can improve outcomes and reduce total cost of care.

Recommended Solution:

Engage catastrophic claimants with dedicated case managers. Establish centers-of-excellence relationships for high-cost conditions such as cancer, transplants, and complex cardiac procedures.

18. Inpatient, Outpatient & Emergency Room Expenditures

The following section identifies expenditures related to Inpatient, Outpatient, and Emergency Room utilization.

Service Type	2021		
	Total \$	Mean \$	N
Inpatient	\$22,024,701	\$491	0
Outpatient	\$14,022,151	\$98	0
Emergency Room			

Total Amount Paid - Inpatient / Outpatient / ER

Key Finding: Avoidable inpatient admissions and emergency room visits represent significant cost-reduction opportunities. Post-discharge follow-up and ER diversion programs can reduce readmissions and unnecessary utilization.

Recommended Solution:

Implement ER diversion programs and post-discharge follow-up protocols. Establish 24/7 nurse triage lines and telemedicine access to reduce non-emergency ER utilization. Target frequent inpatient members with proactive care management.

19. Avoidable Emergency Room Visits

Avoidable ER visits are defined as emergency room encounters for conditions that could have been treated in a primary care or urgent care setting. The following diagnoses represent avoidable ER utilization.

No avoidable ER visit data available for the selected years.

Key Finding: Avoidable ER visits represent unnecessary cost to the plan and inconvenience to members. Assigning a primary care physician to frequent ER utilizers reduces avoidable ER visits by approximately 58%.

Recommended Solution:

Assign primary care physicians to frequent ER utilizers. Distribute medical self-care guides to members. Establish 24/7 nurse advice lines and limit opioid prescribing for non-emergency conditions.

20. Primary Care Physician & Specialty Expenditures

The following section identifies expenditures related to Primary Care Physician services versus Other/Specialty services.

Provider Type	2021		
	Total \$	Mean \$	N
Primary Care Physician Services			
Other/Specialty Services	\$36,046,852	\$191	0

Total Amount Paid - PCP vs Specialty

Key Finding: Specialist utilization without primary care coordination drives unnecessary cost and duplication of services. A primary care-centered model reduces total spend while improving care continuity.

Recommended Solution:

Encourage primary care-led care coordination and appropriate specialty referral pathways. Implement patient-centered medical home models to reduce fragmented specialty utilization.

21. Overall Pharmacy Expenditures by Year

Pharmacy expenditures* (based on paid claims) were as follows:

Pharmacy Records Reporting Year	Total \$	Mean \$	N
2021	\$15,458,476	\$81	0
Total	\$15,458,476	\$0	0

*Pharmacy expenditures do not include medical-related expenditures.

Total Amount Paid - Pharmacy - Total Population

Mean Amount Paid - Pharmacy - Total Population

22. Overall Pharmacy Expenditures by Quarter

Pharmacy expenditures were as follows:

Total Amount Paid - Pharmacy - Total Population

Mean Amount Paid - Pharmacy - Total Population

23. Employee/ Spouse/ Dependent Pharmacy Expenditures

Pharmacy expenditures related to Employees, Spouses, and Dependents were as follows:

Pharmacy Records RELATIONSHIP TO EMPLOYEE	2021		
	Pharmacy Records TOTAL \$	Pharmacy Records MEAN \$	Pharmacy Records N
EMPLOYEE	\$9,282,516	\$0	0
SPOUSE	\$4,719,267	\$0	0
DEPENDENT	\$1,456,693	\$0	0

Total Amount Paid - Pharmacy - Employee / Spouse / Dependent

24. Medication Compliance

Medication Possession Ratio (MPR) is a commonly used measure of medication adherence. An MPR $\geq 80\%$ is generally considered compliant.

Year	All Medication MPR %	Statin MPR %	Hypertension MPR %	Diabetes MPR %	N
2021	91.8%	95.4%	94.7%	—	9,515

Medication Possession Ratio (MPR) by Year

Key Finding: Low Medication Possession Ratio (MPR) indicates medication non-adherence, a key driver of avoidable complications, hospitalizations, and increased long-term costs for chronic disease populations.

Recommended Solution:

Deploy pharmacist-led adherence programs targeting members with MPR below 80%. Implement mail-out reminder systems and therapeutic equivalent drug overlay programs. Use value-based formulary incentives to improve medication adherence across chronic disease populations.

25. Brand vs. Generic Medication Usage

The following section identifies the utilization of Brand versus Generic medications and the associated expenditures.

Drug Type	2021	
	Total \$	N
Brand	\$12,535,947	42779
Generic	\$2,922,529	149090
Other		

Brand vs. Generic Pharmaceutical Expenditure by Year

Brand vs. Generic Split (Total)

Key Finding: High brand drug utilization represents an immediate cost-reduction opportunity. Switching from brand to therapeutically equivalent generic drugs can reduce pharmacy expenditures by 30–60% per prescription.

Recommended Solution:

Enforce generic-first step-therapy policies. Educate prescribers and members on therapeutically equivalent generic options. Use value-based formulary incentives to drive generic utilization.

Appendix 1: Disease Group Definitions

The population is stratified into seven mutually exclusive disease risk groups based on the member's chronic disease burden and annual medical expenditures. The definitions below are used throughout this report.

Disease Group	Definition
Group 1	No chronic disease and less than \$1,500 in medical expenditures per 12 months. This group represents the healthiest and lowest-cost
Group 2	No chronic disease and \$1,500 or more in medical expenditures per 12 months. Members in this group may have acute conditions or h
Group 3	One Chronic Disease. Members carry a single chronic condition that requires ongoing management.
Group 4	Two Chronic Diseases. Members carry two concurrent chronic conditions, increasing care complexity and cost.
Group 5	Three Chronic Diseases. Members carry three concurrent chronic conditions. Intensive disease management is recommended.
Group 6	Four Chronic Diseases. Members carry four concurrent chronic conditions and represent a high-risk cohort requiring coordinated care.
Group 7	Five or More Chronic Diseases. Members in this group carry the highest chronic disease burden and typically account for a disproportion

Members are re-stratified annually based on claims data for the reporting period. A member may move between groups year over year as their health status changes.

Appendix 2: Examples of Diagnostic Categories

The following table provides examples of ICD-10 diagnosis codes and conditions that are classified under each Diagnostic Category used in Section 7 of this report. Categories are based on the ICD-10-CM chapter and block structure.

Diagnostic Category	ICD-10 Chapter / Block	Examples of Conditions Included
Musculoskeletal	Chapter XIII (M00–M99)	Osteoarthritis, rheumatoid arthritis, back pain, disc disorders, fractures of spine/extremities, tendinitis
Neoplasms	Chapter II (C00–D49)	Malignant neoplasms of breast, prostate, colon, lung, skin; benign tumors; carcinoma in situ
Symptoms, Signs & Abnormal Clinical Lab Findings	Chapter XVIII (R00–R99)	Chest pain NOS, shortness of breath, dizziness, fatigue, abnormal blood glucose, abnormal ECG, fever
Factors Influencing Health Status	Chapter XXI (Z00–Z99)	Preventive visits, immunizations, health screenings, routine examinations, medication management visits
Circulatory System	Chapter IX (I00–I99)	Coronary artery disease, heart failure, hypertension, atrial fibrillation, stroke, peripheral vascular disease
Digestive System	Chapter XI (K00–K95)	GERD, Crohn's disease, ulcerative colitis, cholelithiasis, appendicitis, hernia, diverticular disease
Genitourinary System	Chapter XIV (N00–N99)	Chronic kidney disease, urinary tract infections, benign prostatic hyperplasia, kidney stones, incontinence
Respiratory System	Chapter X (J00–J99)	Asthma, COPD, pneumonia, acute bronchitis, sinusitis, sleep apnea, influenza
Pregnancy & Childbirth	Chapter XV (O00–O9A)	Normal delivery, high-risk pregnancy, gestational diabetes, preeclampsia, cesarean delivery
Endocrine / Nutritional / Metabolic	Chapter IV (E00–E89)	Diabetes mellitus type 1 & 2, obesity, hyperlipidemia, hypothyroidism, gout, metabolic syndrome
Mental & Behavioral Disorders	Chapter V (F01–F99)	Depression, anxiety disorders, bipolar disorder, substance use disorders, ADHD, PTSD
Nervous System	Chapter VI (G00–G99)	Migraine, epilepsy, Parkinson's disease, multiple sclerosis, neuropathy, carpal tunnel syndrome
Injury & Poisoning	Chapter XIX (S00–T88)	Fractures, lacerations, contusions, burns, drug poisoning, adverse effects of medications
Eye & Adnexa	Chapter VII (H00–H59)	Cataract, glaucoma, macular degeneration, diabetic retinopathy, conjunctivitis
Infectious & Parasitic Diseases	Chapter I (A00–B99)	Septicemia, HIV disease, viral hepatitis, pneumonia due to organism, Lyme disease

Appendix 3: Examples of Complications of Diabetes

The following table identifies the diabetes-specific complication categories used in Section 9 of this report, along with representative ICD-10 diagnosis codes and clinical descriptions.

Complication Category	ICD-10 Codes (Examples)	Clinical Description
Cardiovascular	I20–I25, I50, I63–I64, E11.40–E11.49	Coronary artery disease, heart failure, stroke, and other cardiovascular events occurring in the context of diabetes.
Peripheral Vascular Disease	E11.51–E11.52, I70–I79, E10.51–E10.52	Peripheral arterial occlusive disease, intermittent claudication, and other vascular compromise affecting the lower extremities.
Neuropathy	E11.40, E11.41, E11.42, G63.2, G90.09	Diabetic peripheral neuropathy, autonomic neuropathy, and painful diabetic neuropathy. Contributes to foot complications.
Nephropathy / Chronic Kidney Disease	E11.21, E11.22, N18.1–N18.6, N08	Diabetic kidney disease ranging from microalbuminuria to end-stage renal disease (ESRD) requiring dialysis.
Retinopathy / Eye Complications	E11.311–E11.359, H28, H36.0	Diabetic background retinopathy, proliferative retinopathy, diabetic macular edema, and other eye complications.
Foot Complications	E11.610–E11.649, L97.1–L97.9, M86	Diabetic foot ulcers, Charcot foot, foot infections, and osteomyelitis. Often preventable with regular foot care.
Hypoglycemia	E11.641–E11.649, E16.0–E16.2	Low blood sugar events including severe hypoglycemia requiring assistance. Associated with medication use.
Hyperglycemic Crisis	E11.00–E11.01, E13.10–E13.11	Diabetic ketoacidosis (DKA) and hyperosmolar hyperglycemic state (HHS). Typically represent uncontrolled diabetes.
Infection / Sepsis	A41, B37, L03, L08, E11.618–E11.638	Diabetes-related increased susceptibility to infections including cellulitis, candidiasis, urinary tract infections, and sepsis.
End-Stage Renal Disease / Dialysis	N18.6, Z99.2, Z49.01, Z49.02	Patients with ESRD requiring chronic hemodialysis or peritoneal dialysis. Represents the most severe complication.

Appendix 4: Preventive Screening Eligibility Criteria

The following table defines the eligibility criteria used to identify members who are due for preventive cancer screenings in Section 14 (Preventive Screening Compliance) and Section 15 (Value of Preventive Screenings). Criteria are aligned with HEDIS technical specifications and USPSTF guidelines.

Screening Type	Eligible Population	Age / Gender Criteria	Screening Interval	HEDIS Measure
Breast Cancer Screening (Mammography)	Female members continuously enrolled for at least 12 months	Women aged 40–74	At least one mammogram in the past 27 months	B08 — Breast Cancer Screening
Cervical Cancer Screening (Pap Smear / HPV)	Female members continuously enrolled for at least 12 months with no history of hysterectomy	Women aged 21–64 (ages 21–24: Pap only; ages 25–64: Pap + HPV co-test)	Pap test every 3 years (ages 21–24); Pap + HPV co-test every 5 years (ages 25–64)	C05 — Cervical Cancer Screening
Colorectal Cancer Screening	Members continuously enrolled for at least 12 months with no history of colectomy	Adults aged 50–75	FOBT/FIT annually, Flexible sigmoidoscopy every 5 years, or Colonoscopy every 10 years	C06 — Colorectal Cancer Screening

Screening Identification Codes (CPT / HCPCS)

The following CPT and HCPCS codes are used to identify completed screenings in the claims data:

Screening Type	CPT / HCPCS Codes
Breast Cancer (Mammography)	77065, 77066, 77067, G0202, G0204, G0206
Cervical Cancer (Pap Smear)	88141–88143, 88147, 88148, 88150, 88152–88154, 88164–88167, 88174, 88175, G0101, G0123, G0124, G0141, G0143–G0145, G0147
Cervical Cancer (HPV Co-test)	87620, 87621, 87622, 87623, 87624, 87625
Colorectal — FOBT / FIT	82270, 82274, G0107, G0328
Colorectal — Flexible Sigmoidoscopy	45330–45335, 45337–45342, 45345, G0104
Colorectal — Colonoscopy	44388–44394, 44397, 44401, 44404–44408, 45355, 45378–45393, 45398, G0105, G0121
Colorectal — CT Colonography	74261, 74262, 74263

Exclusion Criteria

Screening Type	Exclusion Criteria
Breast Cancer	Bilateral mastectomy; history of breast cancer treatment; hospice enrollment during the measurement year.
Cervical Cancer	Total hysterectomy with removal of cervix; history of cervical cancer; hospice enrollment during the measurement year.
Colorectal Cancer	Total colectomy; colorectal cancer diagnosis; hospice enrollment during the measurement year.
